Deliver End-to-End Data Fabric for Autonomous Plant

Move from fragmented systems to connected, data-driven operations

- 20-30% OEE uplift through unified platform
- 40-60% reporting time reduction via automation
- 30% maintenance cost decrease with predictive insights
- Eliminate data silos; accelerate decision cycles

CHALLENGE TO TRANSFORMATION

Unlock plant-wide Digitization for 20–30% OEE lift

From fragmentation to autonomous plant with end-to-end data and automation

Siloed data across plants → unified data platform

Manual reporting → automated, actionable insights

Predictive maintenance underutilized → reduce downtime

Target: 20–30% OEE; 40–60% faster reporting; 30% maintenance cost drop

CHALLENGE TO OPPORTUNITY

Eliminate fragmentation, unleash autonomous plant

Digitize data, automate workflows, and reduce downtime at scale

From siloed data and manual reporting to integrated, autonomous operations

Unify data across plants for faster decisions

Automate reporting; shorten decision cycles by 40-60%

Leverage predictive maintenance to cut maintenance costs by 30%

Digital Plant Blueprint: From Fragmented to Autonomous

Bridges current pain to scalable, data-driven, autonomous operations across plants

Leverage unified data, advanced monitoring, and automated workflows for measurable gains

20-30% OEE uplift via unified data platform

40-60% reporting time reduction through automation

30% maintenance cost decrease with predictive insights

End-to-end data fabric enabling rapid decisioning

Unify data, automate insights, and reduce maintenance cost

Map capabilities to measurable outcomes across OEE, reporting, and maintenance.

→	Unified data platform faster, data-driven decisions
→	Advanced monitoring lower downtime, extend asset life
→	Automation workflows productivity gains, accuracy
→	Compliance-ready reporting 40-60% time reduction

Architected Data Fabric and Automation for Autonomous Plant

From fragmented systems to connected, autonomous plant with unified data, proactive monitoring, and automated workflows.

→	Unified data fabric enabling cross-site insight
→	Real-time monitoring with predictive alerts
→	Automation-driven analytics and reporting
→	Seamless legacy systems integration

Executive KPI Preview

Drive 20–30% OEE, 40–60% Reporting Time Reduction

Quantified outcomes aligning with digitization strategy and end-to-end data fabric.

20–30%

OEE Improvement

OEE uplift: 20–30%

40–60%

Reporting Time Reduction

Reporting time: -40–60%

30%

Maintenance Cost Decrease

Maintenance cost: -30%

From Fragmented Systems to Autonomous Plant

Roadmap outlining phased deployment, milestones, and risk controls

01

Phase 1

Data fabric pilot; 2 plants; 6 weeks

02

Phase 2

Unified platform rollout; 40% of sites

03

Phase 3

Advanced monitoring; automation workflows live

04

Phase 4

full-scale optimization; measure OEE lift

Pricing & Value

Unlock Autonomous Plant Value: Investment Tiers

Align funding with measurable OEE uplift and cost savings

Tiered deployment: core platform, advanced monitoring, full automation

Targeted outcomes: 20-30% OEE, 40-60% reporting time cut

Transparent ROI: 12-18 month payback, ongoing optimization

Flexible governance: phased rollout with clear success gates

CHARTER

Deliver 20–30% OEE uplift via connected, autonomous plant

Execute unified data fabric, automation, and predictive maintenance at scale

From fragmented systems to a single, autonomous manufacturing ecosystem

Unify data across plants for faster decisions

Automate workflows; shrink reporting cycle 40–60%

Leverage alerts for 30% maintenance cost reduction
