

PRUDENTIAL ZAMBIA — CHALLENGE

Prudential Zambia: WhatsApp-Driven Transformation for Onboarding, Renewals, and Collections

Unified, compliant engagement across policyholders, agents, and channels

Prudential Zambia faces fragmented communications across CRM, PMS, and support tools. This slide outlines how Marichi WhatsApp Commerce Platform centralizes interactions, automates policy onboarding, proactive renewal reminders, and seamless premium collections to boost customer satisfaction and agent productivity.

Prudential Zambia: Market Opportunity for WhatsApp-led Engagement

A unified, digital-first channel is now essential to meet policyholders’ expectations and accelerate onboarding, renewals, and collections.

As Prudential Zambia accelerates its digital transformation, the market is shifting toward WhatsApp as the primary channel for policyholders and prospects. Increased smartphone adoption, real-time messaging expectations, and regulatory emphasis on compliant communications create a clear path for a centralized, WhatsApp-driven engagement model that speeds onboarding, reminders, and servicing.

Prudential Zambia: Quantified Impact of WhatsApp Transformation

Projected uplift in renewals, collections, and satisfaction through WhatsApp-driven engagement

This slide translates market and internal benchmarks into measurable outcomes for Prudential Zambia. By integrating WhatsApp commerce and automation with CRM/PMS and payments, Prudential can expect uplift in policy renewals, faster premium collections, and higher customer satisfaction through , proactive messaging.

- **Renewals uplift** Increased timely reminders drive higher renewal rates
- **Collections acceleration** Automated payment prompts reduce lapse risk
- **Customer satisfaction** Centralized, consistent communications improve experience
- **Operational efficiency** Streamlined workflows reduce handling time

Prudential Zambia — Core Engagement Challenges

Prudential Zambia faces fragmented customer communications, manual onboarding workflows, and imperfect automation of reminders and renewals. These challenges create delays, reduce agent productivity, and risk missed renewals and collections across channels.

01

Disjointed customer conversations
Multiple channels and agents slow response

02

Manual policy onboarding and lead follow-ups
Inconsistent handoffs

03

Non-automated premium reminders
Delayed payments and renewals

04

Lack of centralized visibility
Fragmented data across CRM, PMS, and support

05

High agent workload from repetitive tasks and handoffs

06

Limited measurement of channel performance and response times

Marichi WhatsApp Flow for Prudential Zambia

A cohesive hero-style flow diagram that maps Prudential Zambia’s end-to-end customer journeys on WhatsApp. The flow demonstrates how onboarding, reminders for premiums, renewal communications, and servicing interactions are orchestrated in a single, compliant channel with CRM/PMS and payment gateway integrations.

Prudential Zambia: WhatsApp Commerce Capabilities

Tailored capabilities map to Prudential Zambia's use cases

Marichi WhatsApp Commerce Platform unlocks a unified, proactive engagement flow across Prudential Zambia's key insurance use cases, delivering automated onboarding, reminders, and servicing within WhatsApp. Each capability is mapped to a named use case to drive faster onboarding, improved renewals, and steadier collections.

01

Lead generation & qualification

WhatsApp-driven conversations capture intents, pre-qualify prospects, and route to agents

02

Policy onboarding

Guided, compliant onboarding flows that collect KYC and policy data within WhatsApp

03

Reminders & payments

Automated premium reminders and secure in-message payments to reduce lapse risk

04

Renewals campaigns

Proactive renewal nudges with personalized policy details and checkout options

05

Claims & servicing

Real-time claims updates and servicing queries routed to the right support lane

06

Cross-sell/Upsell campaigns

Contextual offers based on policy mix and customer lifecycle

Prudential Zambia Use Case Flows

Deep dive into the primary use cases with pragmatic flows. Each flow specifies data touched, owners, and expected outcomes to align across CRM, PMS, payments, and WhatsApp channels.

Concentric Architecture of Prudential Zambia’s WhatsApp Commerce

This slide presents the 3 concentric rings of Prudential Zambia’s Marichi-driven architecture. Outer ring shows customer touchpoints via WhatsApp, middle ring hosts integration and orchestration, and inner ring houses the AI core and policy-aware decision logic.

Outer Ring

Customer Touchpoints – WhatsApp-driven conversations across leads, onboarding, reminders, and servicing

Inner Ring

Intelligence Core – AI-powered workflows, policy status intelligence, and compliant messaging rules

Middle Ring

Integration Layer – CRM, Policy Management System (PMS), Payment Gateway, and Support Platform connect and synchronize data

Governance & Security

Centralized policy controls, audit trails, and regulatory compliance baked into every flow

Prudential Zambia: Quantified Impact of WhatsApp Transformation

This slide translates Prudential Zambia’s WhatsApp-driven capabilities into concrete, insurance-specific KPIs. It shows how automated onboarding, reminders, and centralized servicing drive measurable improvements in policy renewals, premium collections, and CSAT, while reducing handling time and SLA exposure.

- 01 **Onboarding acceleration**
Time-to-policy reduces through automated WhatsApp workflows
- 02 **Renewals uplift**
Proactive reminders improve renewal rates and reduce lapse risk
- 03 **Collections efficiency**
Automated reminders and in-app payments shorten collection cycles
- 04 **CSAT and SLA impact**
Centralized, consistent messaging lowers average handling time
- 05 **Agent productivity**
Reduced manual handoffs frees time for complex inquiries

BUSINESS IMPACT

Prudential Zambia: Phased Rollout of Marichi WhatsApp Commerce

This slide outlines a pragmatic, phased implementation plan tailored to Prudential Zambia. Each phase aligns with integration into CRM/PMS, pilot adoption, and scaled rollout to maximize policy onboarding, renewals, and premium collections.

Phase 1 — Foundation & Governance

Months 1–3

- Finalize API contracts for CRM, PMS, and Payment Gateway
- Define data mapping, consent capturing, and privacy controls
- Set up security, audit trails, and compliance dashboards
- Establish cross-functional rollout governance and success criteria

Phase 2 — Pilot & Validation

Months 4–6

- Deploy core onboarding, reminders, and servicing flows with a control group
- Monitor SLA adherence, response times, and agent workload
- Collect feedback to refine templates, automations, and intents
- Validate revenue impact from initial renewals and payments

Phase 3 — Scale: Onboarding & Collections

Months 7–9

- Roll out across all policy types with automated renewal campaigns
- Integrate payment gateway for seamless in-WhatsApp collections
- Enable cross-channel handoffs to agents with centralized view
- Strengthen compliance controls and audit readiness for live operations

Phase 4 — Insights & Optimization

Months 10–12

- Publish analytics on channel performance, response times, and cadence
- Iterate on flows based on A/B tests and agent feedback
- Increase automation coverage for routine servicing and inquiries
- Enhance risk monitoring and renewal forecasting models

PRUDENTIAL ZAMBIA — PRICE

Prudential Zambia: Marichi Pricing Overview

Transparent, per-tenant pricing aligned to value delivered

This pricing slide presents a clear total cost of ownership and payback profile for Prudential Zambia when adopting Marichi WhatsApp Commerce Platform. It outlines per-month and per-tenant options, ensuring the price-to-value alignment supports budgets across policy onboarding, renewals, and collections workflows.

Per-Tenant Model: predictable monthly spend aligned to scale of agents and channels

Seat-based Tiers: Essentials, Pro, and Enterprise aligned to Prudential Zambia's use cases

Included Capabilities: WhatsApp engagement, CRM/PMS integration, payment flows, and analytics

Cost of Ownership: includes implementation, training, and ongoing support
