

PRUDENTIAL ZAMBIA — TRANSFORMATION OVERVIEW

Prudential Zambia: WhatsApp-Driven Engagement Transformation

Accelerating onboarding, renewals, and claims support through a unified WhatsApp Commerce Platform

Prudential Zambia needs a single, scalable engagement backbone to consolidate customer communications, automate onboarding and reminders, and provide end-to-end visibility across policy administration, payments, and claims. This cover sets the stage for a transformation that improves renewal rates, accelerates collections, and elevates customer experience by centralizing interactions on WhatsApp via Marichi.

Prudential Zambia: Digital Engagement Opportunity with WhatsApp

WhatsApp as the primary channel for life insurance and financial services in Zambia

Prudential Zambia operates in a market where customers expect convenient, channel-agnostic interactions. With WhatsApp penetration high across urban and rural segments, there is a clear path to centralize communications, accelerate onboarding, and drive timely renewals and payments through a single, compliant conversational layer.

Prudential Zambia: Fragmentation in Customer Engagement

Prudential Zambia currently grapples with dispersed communications, manual onboarding, uneven renewal reminders, and fragmented servicing across channels. This fragmentation slows onboarding, delays renewals, and hampers timely claims support, creating a suboptimal customer experience and increased operational risk.

01

Communication across agents and channels is siloed and inconsistent

02

Policy onboarding and lead follow-ups rely on manual workflows

03

Renewal reminders and premium collections are not fully automated

04

Servicing and claims updates lack centralized visibility

Prudential Zambia: WhatsApp-Centric Engagement Architecture

Marichi becomes the central engagement layer for Prudential Zambia, orchestrating WhatsApp-based lead gen, onboarding, payments, renewals, claims updates, and support. The flow connects to CRM, policy management, payment gateways, and analytics to deliver a 360-degree customer view and auditable interactions.

Prudential Zambia: WhatsApp Capabilities Mapped to Use Cases

Capabilities aligned to Prudential Zambia's life insurance and financial services workflows

This icon_grid slide maps Marichi WhatsApp Commerce Platform capabilities to Prudential Zambia's exact use cases: lead gen and qualification, policy onboarding, premium reminders and renewals, centralized communications, policy management integrations, and AI-powered conversational workflows. Each capability is framed to drive faster onboarding, healthier renewals, and unified servicing across Zambia's distributed agent network.

01

WhatsApp-based Lead Gen & Qualification

Capture and qualify leads directly in WhatsApp to shorten the sales cycle for Prudential Zambia.

02

Policy Onboarding Automation

Automated onboarding and e-sign/verification flows to accelerate policy issuance with accuracy.

03

Automated Premium Reminders & Renewals

Timely, automated reminders that boost on-time payments and renewals.

04

Centralized Communications & Case Tracking

Single source of truth for all policy servicing, claims, and customer inquiries.

05

CRM & Policy Management System Integrations

Real-time data sync to deliver a 360-degree customer view and seamless workflows.

06

Analytics & AI-powered Conversational Workflows

Proactive, personalized engagement with insights to lift CSAT and conversions.

Prudential Zambia: Concentric Architecture for Marichi WhatsApp

A layered diagram of Prudential Zambia's Marichi WhatsApp Commerce Platform illustrating how the outer layer (customer touchpoints) feeds the middle layer (automation and orchestration) which in turn anchors the inner layer (AI-driven intelligence and policy governance). This architecture enables a unified 360-degree view, end-to-end workflows, and auditable interactions across life insurance and financial services.

Outer Ring - Customer Touchpoints
WhatsApp-based conversations for lead gen, onboarding, renewals, payments, and claims

Middle Ring - Orchestration Layer
Automation engine coordinating CRM, policy management, payments, and support workflows

Inner Ring - Intelligence Core
AI-driven chat, decisioning, and governance for compliant customer engagements

Data & Integrations
Real-time sync with CRM, Policy Management, Payment Gateway, and Analytics

- 01 **Renewals uplift**
18% increase in on-time renewal rates
- 02 **Collections efficiency**
22% reduction in days-to-collection
- 03 **CSAT improvement**
+12-point rise in customer satisfaction scores
- 04 **Operational burden**
28% reduction in manual touchpoints
- 05 **Onboarding speed**
34% faster policy issuance

BUSINESS IMPACT

Phased WhatsApp Transformation for Prudential Zambia

This staggered Phases layout presents a Pragmatic rollout for Prudential Zambia, aligned with life insurance onboarding, renewals, claims updates, and servicing through Marichi WhatsApp Commerce Platform. Each phase builds enterprise-grade capabilities while validating ROI and governance at scale.

Phase 1 — Discovery

Months 1–2

- Stakeholder workshops to confirm scope and success metrics
- Assemble integration blueprint with CRM, policy, and payments
- Baseline current-state process maps and SLAs
- Define governance, compliance, and audit requirements

Phase 2 — Integration

Months 2–4

- Connect CRM, Policy Management, and Payments with Marichi
- Migrate data silos to a centralized customer view
- Set up event-driven workflows for onboarding and renewals
- Establish security controls and access governance

Phase 3 — Pilot

Months 4–6

- Deploy core use-cases with select agents and policy types
- Measure onboarding time, renewal rates, and claim updates
- Tighten SLAs and escalation paths
- Gather customer feedback to refine chat flows

Phase 4 — Scale

Months 6–9

- Roll out to all regions and product lines
- Automate premium reminders and cross-sell campaigns
- Institute enterprise-wide governance and auditability
- Expand analytics for proactive servicing insights

PRUDENTIAL ZAMBIA — PRICING

Prudential Zambia: Transparent Pricing by Module

Align investment with expected outcomes and budget ranges

Enterprise-grade pricing blocks that map directly to Prudential Zambia's WhatsApp Commerce platform modules. Each block highlights value, usage guards, and scale considerations to help governance and budgeting for life insurance and financial services workflows.

Lead Gen & Qualification Module: predictable costs tied to volume and seats

Policy Onboarding Automation: modular pricing based on policy issuances and touchpoints

Automated Reminders & Renewals: per-notification pricing with volume tiers

Centralized Communications & Case Tracking: flat-rate platform access + per-user or per-case options

CRM & Policy Management Integrations: integration-ready pricing with API usage allowances

Analytics & AI Workflows: tiered pricing by data events, AI conversations, and insights

Prudential Zambia: ROI Timeline for WhatsApp Commerce

Payback and value realization through unified engagement across life insurance and financial services

A KPI-driven flow that maps cost savings, productivity gains, and revenue impact from adopting Marichi WhatsApp Commerce Platform. Shows how automated onboarding, reminders, and centralized case tracking accelerate payback for Prudential Zambia’s distributed agent network.

PROJECTED IMPACT

-28% **Annual Cost Savings**
Onboarding & lead qualification automation reduces manual touchpoints across channels

12 months **Payback Period**
Automated premium reminders lift on-time payments and renewal rates

+22% **Incremental Revenue from Renewals**
Centralized communications deliver faster issue resolution and higher CSAT

Prudential Zambia: Data Governance, Security & Change Readiness

This slide outlines the governance, risk, and operational readiness milestones required for Prudential Zambia to adopt Marichi WhatsApp Commerce Platform. Each phase includes data controls, security gates, policy management alignment, and change management to ensure a compliant, auditable, and scalable deployment.

Phase 1 — Phase 1

Months 1–2

- Define data owners and access governance for Prudential Zambia
- Map regulatory requirements to platform data flows
- Baseline security architecture and encryption standards
- Initiate policy management alignment with existing systems

Phase 2 — Phase 2

Months 2–4

- Implement encryption, key management, and DLP controls
- Establish audit logging, retention schedules, and monitoring
- Configure role-based access and incident response playbooks
- Begin vendor and third-party risk assessments

Phase 3 — Phase 3

Months 3–5

- Define data quality rules and master data governance
- Create 360-degree customer view ingestion and reconciliation
- Pilot governance dashboards with compliance team
- Finalise policy and change management guidelines

Phase 4 — Phase 4

Months 4–6

- Train operations staff and contact center agents
- Establish change control board and go/no-go criteria
- Execute go-live readiness reviews and fallback plans
- Deploy incident response and disaster recovery drills

PRUDENTIAL ZAMBIA — FINAL CALL TO ACTION
